

Thank you for considering Environment 21 for your stormwater management needs. Environment 21, LLC (ENV21), is a technology-based product developer/innovator serving the concrete pre-casting industry. Environment21 was established in 1996 is located at 8705 Read Road , East Pembroke, NY. Environment 21 designs, develops, engineers, and sells proprietary stormwater treatment systems worldwide. We have a growing presence throughout the United States, with our strongest concentration in the eastern states. Environment 21's main product is a hydrodynamic separator called the V2B1, which is NJCAT verified. The V2B1 takes advantage of a very simple, patented, proprietary design that allows for the product to be produced worldwide by precasters using locally available materials. Our business model is to provide designs for stormwater products that can be produced by precasters all over the world, using locally available materials, thus reducing the need for global shipping and storage.

Environment 21 specializes in providing the world with stormwater treatment systems satisfying local regulations for watershed protection. Our goal is to provide the customer with cost effective and efficient solutions to the continuing problem of stormwater treatment. Here are just some of our installation locations.
