## OF TECHNOLOGY ASSESSMENT

### V2B1 Stormwater Treatment System

*Based on a review of the data and the information submitted in support of the technology (see Notable Aspects and Appendix) the ministry concludes that the V2B1 is a viable system for use in the separation of sediments from stormwater. Where the Normal or Enhanced Level of protection (as defined in Stormwater Management Planning and Design Manual, MOE, March 2003) is required, the technology may be applied as part of a treatment train.*

*Application of this technology in Ontario sites will have to meet the requirements of the Ontario Water Resources Act and the Environmental Protection Act, and will be required to obtain a Certificate of Approval issued under the Ontario Water Resources Act.*

Dale Henry, Director  
Standards Development Branch  
Ontario Ministry of the Environment  
(September 2007)

**New Environmental Technology Evaluation Program**

*Promoting the development and application of new environmental technologies*
